Subject: Re: Ukraine

Mark,

Thanks for the head's up. I'll pass this on to our liaisons and see what can be lined up in terms of analytical support and resources for you.

Damon

Paul,

I have just been made the EPA POC for a Ukraine environment task force lead by State to assess, document, and understand the damage caused by the Russian Federation's war in Ukraine. We are to look at radiation, drinking water, chemical exposures and anything else in EPA's lane. This is an area that your office could help us. We will need to understand what facilities Ukraine has and then track their status as Russia's attacks intensify.

I will get more information next week, but wanted to give you a heads-up. We are aware that there is a lot of work being done on the defense, refugee, and intelligence sides already, but have been asked to gear up now on the environment side as well.

Thanks, Mark
